

## Perfect forage, all wrapped up.

You work hard all year round to make the best feed for your animals. And to make sure this feed keeps usable for a long time without losing any valuable nutrients, we have developed the Fendt Rollector bale wrapper. Our round bale wrappers are perfectly adapted to your needs and also meet the highest demands. With different sizes and options to choose from. But all Rollectors have one thing in common – they are super gentle on the bales to get the best feed quality.

FENDT ROLLECTOR 130

# Fendt Rollector 130: Small yet mighty.

### Small and agile

The Fendt Rollector 130 is the perfect wrapper for 0.90m-1.30m diameter bales, demanding very little from the towing vehicle – great news for smaller farms. Its stable and durable frame makes the round bale wrapper super durable. Its straightforward design gives you a great view of the wrapping process at all times. The Rollector is incredibly manoeuvrable with its slimline drawbar. Thanks to the height-adjustable towing device, you can adapt the Rollector 130 perfectly to your tractor. Practical features top it all off, including a holder with room for up to three extra film rolls.

### Smooth transition

No time-wasting – the Rollector 130 is quick and easy to switch from transport to working position. In transport position, the Fendt Rollector 130 measures a narrow 2.50 m for safe transit. In the wrapping unit, the track gauge increases to 2.85 m – for maximum stability when the bales come in. When this happens, the whole right axle leg rotates; tyres and all. You can rotate the unit manually. The machine is lifted out on one side with the double-acting function of the loading arm. During transport, the loading arm is securely locked.

### It all starts with the bale

Effective bale wrapping starts with the pickup. With its simple operating principle, the Rollector 130 easily picks up the bale with a stable hydraulic loading arm. When wrapping, you can vary the number of film layers and work with a choice of two different film widths. The wrapping table automatically sets the required number of turns and ensures that the plastic overlaps properly. The drive system of the bale-wrapping table with solid gears is particularly robust. Our innovative film pre-stretching system saves on film every time. The height-adjustable film roll holder with quick-clamping system makes light work of changing the film. The bale drop is gentle – thanks to the low drop height from the wrapping table itself. You can also choose to equip your Rollector 130 with a bale turner to drop the bale at the front.

### Easy controls

The Fendt Rollector 130 has a self-explanatory control unit with intuitive E-Link Basic. Once the bale is on the wrapping table, the wrapping process starts at the push of a button. E-Link Basic lets you know when it's done, with an acoustic signal. The control unit also has a bale counter for 8 different fields and the option to show the daily count and total number of bales.

The Fendt Rollector wraps bales with a diameter of 0.90 m to 1.30 m.

Practical: You can store up to three film rolls on the Rollector 130.

## FENDT ROLLECTOR 160

# It's a perfect wrap.

### Made for you

Designed for the highest demands, super gentle and extra powerful – the Fendt Rollector 160 is the single round bale wrapper for the best feed quality. The Rollector 160 makes light work of wrapping 1.25 m to 1.60 m diameter round bales. The stable frame promises that all-important durability. The slimline drawbar design guarantees outstanding manoeuvrability. Its straightforward design gives you a great view of the wrapping process at all times. And you have the option to transport up to two bales on your Rollector. One on the wrapping table and one on the pickup arm.

### Good to go

Did you know? There's no need to switch from working position to transport position on the Rollector 160, as the machine has a balancing weight on the left side of the frame. The machine width still measures only a slim 2.30 m.

### From pickup to active drop

The Rollector 160 efficiently picks up bales with its stable hydraulic loading arm. Both the loading arm and the wrapping table can be adapted to different bales. It can wrap 1.25m-1.60m diameter bales. You can also vary the number of film layers and choose between two different film widths. The wrapping table automatically sets the required number of turns and ensures that the plastic overlaps properly. Our innovative film pre-stretching system saves on film every time. The height-adjustable film roll holder with quick-clamping system makes light work of changing the film. The Rollector 160 is equipped with a bale unloading table for active dropping – this effectively avoids damage to the film. There is also an optional bale tipper to drop the bale at the front.

### Maximum control

The Fendt Rollector is equipped with E-Link Plus for maximum ease of use. From loading to gentle bale drops – all automated at the push of a button. The bale counter stores up to 10 different jobs. And E-Link Plus has an extremely clear daily counter.

Both the loading arm and the wrapping table can be adapted to different bale sizes. Safely pick up bales with a diameter of 1.25 m to 1.6 m and pack them airtight in film.

The Rollector 160 is equipped with a bale unloading table with active drop – this effectively avoids damage to the film.
